Mr. Merse points out that a supply

Previous investigation has been made of the Patuxent as a source of water supply for the District, but Mr. Morse says that the Middle and Little Patuxents have never been considered. The drainage areas of these two are near the Patuxent and they could deliver 160,000,000 gallons of water a day. Present consumption in Washington is but about 65,000,000 try Club, Bradley Hills, will be held at the Burlington from 5 to 6:30 o'clock.

Water Is Softer.

In addition Mr. Morse points but that the average turbidity of the waters of the Patusent is less than that of the Potomse and the water is softer, being beer for industrial and household uses. He shows how the Patusent supply could be economically combined with the present Potomac supply to meet all needs.

Mr. Morse lists the following advantages to Washington in the use of Patusent waters:

An additional supply of 160,000,000 gallons a day, instead of 60,000,000 gallons.
